Description

Magnetic level switches are used for the monitoring and control of liquid levels in vessels. Magnetic level switches are manufactured to customer specification.

An overview of types available with minimum lengths of guide tube is set out on the following pages. Please refer to this overview when placing your order. Furthermore any limits can be specified within the limits found in the brochure.

For example:

- Longer guide tube
- Longer connection cable
- Different cable materials
- Several contacts and different contact operations
- Wide range connections and electrical terminal boxes
- Different materials

Method of Operation

Kobold magnetic float switches are fitted with a hermetically sealed contact which is situated in the tube.

The float sliding on the tube contains a ring magnet whose magnetic field switches the sealed contact in a non contacting fashion. The sealed contacts are available as N/O, N/C or changeover contacts.

The float sliding up and down on the liquid is the only moving part in the Kobold magnetic float switches.

Advantages

- Simple installation
- Long electrical service life due to sealed contacts
- High-degree of operational reliability with air gap between guide tube and floats
- Installation in top or bottom of vessel
- Several levels can be monitored with one float
- Open/close function or changeover contact available

***Please note:**

Contact operation refers to a rising level. Simply link letters for several contacts. The first letter represents the topmost contact, the second letter the second contact from the top, and so on. The position of the contacts, measured from the sealing edge of the connection screwing, must also be specified.

L1 = highest contact (mm) from the top (sealing edge)
 L2 = second contact (mm) from the top (sealing edge)
 and so forth

Guide tube length is designated as L0 (see dimensional drawings)

¹⁾ For model M06, one float is required for each switch point.
For all other floats two contacts can be operated with one float.

ATEX-Certificate:

 II 1 GD Ex ia IIC T6 Ga / Ex ia IIIC T85 °C Da
-20 ≤ Ta ≤ +60 °C

Mounting instructions

Float switches can also be fitted in the bottom of vessels.

Important: *The contact operation is then reversed.*

Damping tube for agitated liquids

Float switches with damping tube for agitated or dirty liquids can be supplied upon request.

Temperature monitoring

Float switches with integrated temperature switch, fixed switch point between 60 °C and 150 °C upon request.

Option: Pt100 available

Supplementary devices:

1. Contact protection relays/isolation switching amplifier

We recommend the use of contact protection relays in conjunction with sealed contacts.

Contact protection relays have the following advantages:

- No contact overloads arising from sparking and high currents, which can, for example, be caused by self-induced emf when switching solenoid valves.
- Float switches are electrically isolated from the high voltage power supply system.
- Protection for persons who come into contact with liquids according to VDE 0100.
- Standard models:
Model MSR 10, 1 channel
Model MSR 20, 2 channels
Model MSR 11, 1 changeover bistable
- ATEX-models:
Model KFD2-SR2-Ex1.W 1 channel, 1 relay output, supply 20 ... 30 V_{DC}
Model KFA6-SR2-Ex1.W 1 channel, 1 relay output, supply 207 ... 253 V_{AC}
Model KFD2-SR2-Ex2.W, 2 channels, 2 relays output, supply 20 ... 30 V_{DC}
Model KFA6-SR2-Ex2.W, 2 channels, 2 relays output, supply 207 ... 253 V_{AC}
