Description

Magnetic level switches are used for the monitoring and control of liquid levels in vessels. Magnetic level switches are manufactured to customer specification.

An overview of types available with minimum lengths of measuring tube is set out on the following pages. Please refer to this overview when placing your order. Furthermore any limits can be specified within the limits found in the brochure.

For example:

- Longer measuring tube
- Longer connection cable
- Different cable materials
- Several contacts and different contact operations
- Larger connection screwing with electrical terminal box
- Different materials

Method of Operation

Kobold magnetic float switches are fitted with a hermetically sealed contact which is situated in the tube.

The float sliding on the tube contains a ring magnet whose magnetic field switches the sealed contact in a noncontacting fashion. The sealed contacts are available as N/O, N/C or changeover contacts.

The float sliding up and down on the liquid is the only moving part in the Kobold magnetic float switches.

Advantages

- Simple installation
- Long electrical service life due to sealed contacts
- High-degree of operational reliability with air gap between measuring tube and fl
- Installation in top or bottom of vessel
- Several levels can be monitored with one float
- Open/close function or changeover contact available

***Please note:**

The contact operation refers to a **rising level**.
Simply link letters for several contacts.
The first letter represents the topmost contact, the second letter the second contact from the top, and so on. The position of the contacts, measured from the sealing edge of the connection screwing, must also be specified.

L1 = highest contact (mm) from the top (sealing edge)
L2 = second contact (mm) from the top (sealing edge)
and so forth

PVC: max. 70 °C (standard)

Silicone: max. 150 °C

Please note max.-values of every single model

Technical Details

Hysteresis: 3-5 mm
difference in level

Switch point distance:

- between contact 1 and 2 and contact 3 and 4: > 40 mm
depending on height of float

- between contact 2 and 3: height of float +15 mm

Non-standard versions available

Contact protection relays

Model MSR 10 for single contacts

Model MSR 20 for single contacts

Model MSR 11 for twin contact, catching

Supplementary devices:

1. Contact protection relays

We recommend the use of contact protection relays in conjunction with sealed contacts.

Contact protection relays have the following advantages:

- No contact overloads arising from sparking and high currents, which can, for example, be caused by self-induced e.m.f.'s when switching solenoid valves.
- Float switches are electrically isolated from the high voltage power supply system.
- Protection for persons who come into contact with liquids according to VDE 0100.

2. Damping tube for agitated liquids

Float switches with damping tube for agitated or dirty liquids can be supplied upon request.

3. Temperature monitoring

Float switches with integrated temperature switch, fixed switch point between 60 °C and 150 °C upon request.

Option: Pt 100 available

4. Mounting instructions

Float switches can also be fitted in the bottom of vessels.
Important: The contact operation is then reversed.

Contact operation with rising level:

N/O contact: 230 V_{AC} / 1 A / 60 VA
 N/C contact: 230 V_{AC} / 1 A / 60 VA
 Changeover contact: 230 V_{AC} / 1 A / 60 VA
 Cable length: 1 m NYLHY
 Installation position: vertical ±30°

Please note: with 4 contacts min. distance between contact 2 and 3 100 mm

Protection type: IP 65
 Switch point min. distance from end of meas. tube: 90 mm ±5
 (for special length) *also available with connection 6.2*
